

Vertefert liquid fish fertiliser NPK 8.3.6, based on organic fish, provides a link between organic harmony and the requirements for premium outputs needed to provide both high yields of quality product, and profits. It contains no meat, blood or bone of animal origin.

Vertefert provides a balanced range of clean, safe nutrients to a wide range of crops in a variety of environments. It won't leach to contaminate groundwater supplies and won't burn even the most tender seedling. Vertefert is very much a method of improving your growing environment to provide deeper top soil and better rooting which prevents pulling in the dry, better capillary action to bring water up in the dry, better soil drainage in the wet and quicker recovery once it rains.

- Balanced range of fertilising elements plus natural growth promotants, proteins, carbohydrates, enzymes and amino acids
- Improved soil aeration, permeability and water holding
- Increased plant resistance to disease and pests
- Better stock health means increased production with less stress
- Enhances soil micro-organism populations
- Environmentally friendly - stays where its put to do the job and feeds soil bacteria
- No wastage or contamination due to leaching
- Feed and weed at the same time - acts as a sticker for herbicides
- Performance proven for top production
- Improved pasture ME and digestibility levels

Leaf Shine

For healthier, better looking indoor plants

Give your indoor plants more light and air with Leaf Shine. Removes dust and dirt from leaves to aid photosynthesis, and gives your plants a natural sheen. Blooming Good Leaf Shine contains a foliar fertiliser to help nourish the plant. Easy to use – each month simply apply Leaf Shine to a soft tissue or cotton wool and gently wipe top of leaf. If the plant is particularly dusty, use a soft duster first.

5 litre**

Synerlogic

Provides all the benefits derived from its organic base of meat, blood & bone including proteins, albumin and globulin, enzymes and amino acids, together with added carbohydrates, sugars, macro and micro elements and naturally occurring growth promotants. This blend gives a balanced liquid fertiliser with all the life giving elements necessary to provide optimum plant performance and health. **Synerlogic** can be applied as a foliar spray, as a base fertiliser, as a total replacement fertiliser or as a foliar spray booster. When applied as a foliar spray nutrients are more rapidly available to the plant through the foliage, with the suspended solids available to the plant root system and the soil life over a longer period of time, thus providing the best of both worlds.

Every Gardener Needs These

The Garden Bag is an essential item in every garden. We've had one for years and recently came across a supplier. 2 Sizes, the **Large Garden Waste BAG** is 70cm x 70cm and 77cm high. The **Small Garden Waste BAG** is 43cm long 41cm wide and 49cm high. Both come with carry handles and are convenient for the disposal of leaves, grass, weeds etc. They are waterproof and rot proof. They come in handy for all manner of other things too. We have **THE Small Waste BAGS** in the boot to put the groceries in or to use when we come out loaded up from the Garden Centre. Others could be handy to store things in. They are reusable too. Much better for the environment than those plastic supermarket bags.

PROFESSOR MACS 3 IN 1 FOR LAWN PESTS

Wally came across this in conversation with an Australian Bowling Green Keeper. Not only does this give fantastic control of grass grubs, black beetles, root nematodes and porina caterpillars. Often lawns are the home of garden slugs which emerge out of the soil and thatch to invade our gardens during moist times. The product knocks them out also.

Worms will happily live underneath the oil layer in the top soil without any known adverse effects. He says this is more effective than chemicals, but best of all the people in contact with the lawn are not being contaminated by harmful chemicals. This product is made from Eucalyptus and Tea Tree Oil.
